

**LOTTERY SYSTEM WITH METHOD FOR PAYING MULTIPLE
PROGRESSIVE JACKPOTS**

Abstract of the Disclosure

[0073] In one aspect, the invention is directed to a method for awarding at least a portion of a jackpot amount in a lottery game for a plurality of players. The method may include accepting an entry from each of the plurality of players for an occurrence of the lottery game, wherein each entry may include a first subset of numbers selected from a predetermined range of numbers, and determining an outcome for the occurrence of the lottery game, wherein the outcome for the occurrence of the lottery game may include a second subset of numbers selected from the predetermined range of numbers. The method may also include comparing the first subset of numbers for each of the entries to the second subset of numbers for the outcome of the lottery game, and determining the number of matched numbers for each entry between the first subset of numbers for the entry and the second subset of numbers. Still further, the method may include determining that none of the entries for the occurrence of the lottery game match every number in the first subset of numbers for the entry to a corresponding one of the numbers in the second subset of numbers, and awarding a share of the at least a portion of the jackpot amount to at least a portion of the entries for the occurrence of the lottery game wherein none of the numbers of the first subset of numbers of the entry match any of the numbers in the second subset of numbers for the outcome of the lottery game.
